ATTACHMENT 30 PART A

NARRATIVE OF INTERIOR DESIGN OBJECTIVES

Project: 37<sup>th</sup> Bomb Squadron Operations Facility  
Ellsworth AFB, SD  
PN FXBM993001

## Objectives for the Appliance/Electronics Package

The objective of the Appliance/Electronics Package for the 37<sup>th</sup> B-1B Bomber Squadron Operations Facility is to provide a portfolio of items to coordinate with the furniture, Equipment and building design efforts and to create a finished environment intended to increase individual and organizational performance and efficiency. The items in the A/E package include those that are to be procured outside the MILCON funding and need to be accounted for in the design process.

The new building will accommodate primarily four groups, Command Section, Operations, Life Support and Maintenance. The upper level houses the Command section and most of the Operations functions, the mid-level contains the Ops desk, DO, and Scheduling offices and the lower level has the Life Support and Maintenance functions.

Electronic systems have been selected to work with existing base systems where necessary. Appliances have been selected to meet the users requirements. The items meet the durability and aesthetic requirements of the overall project.

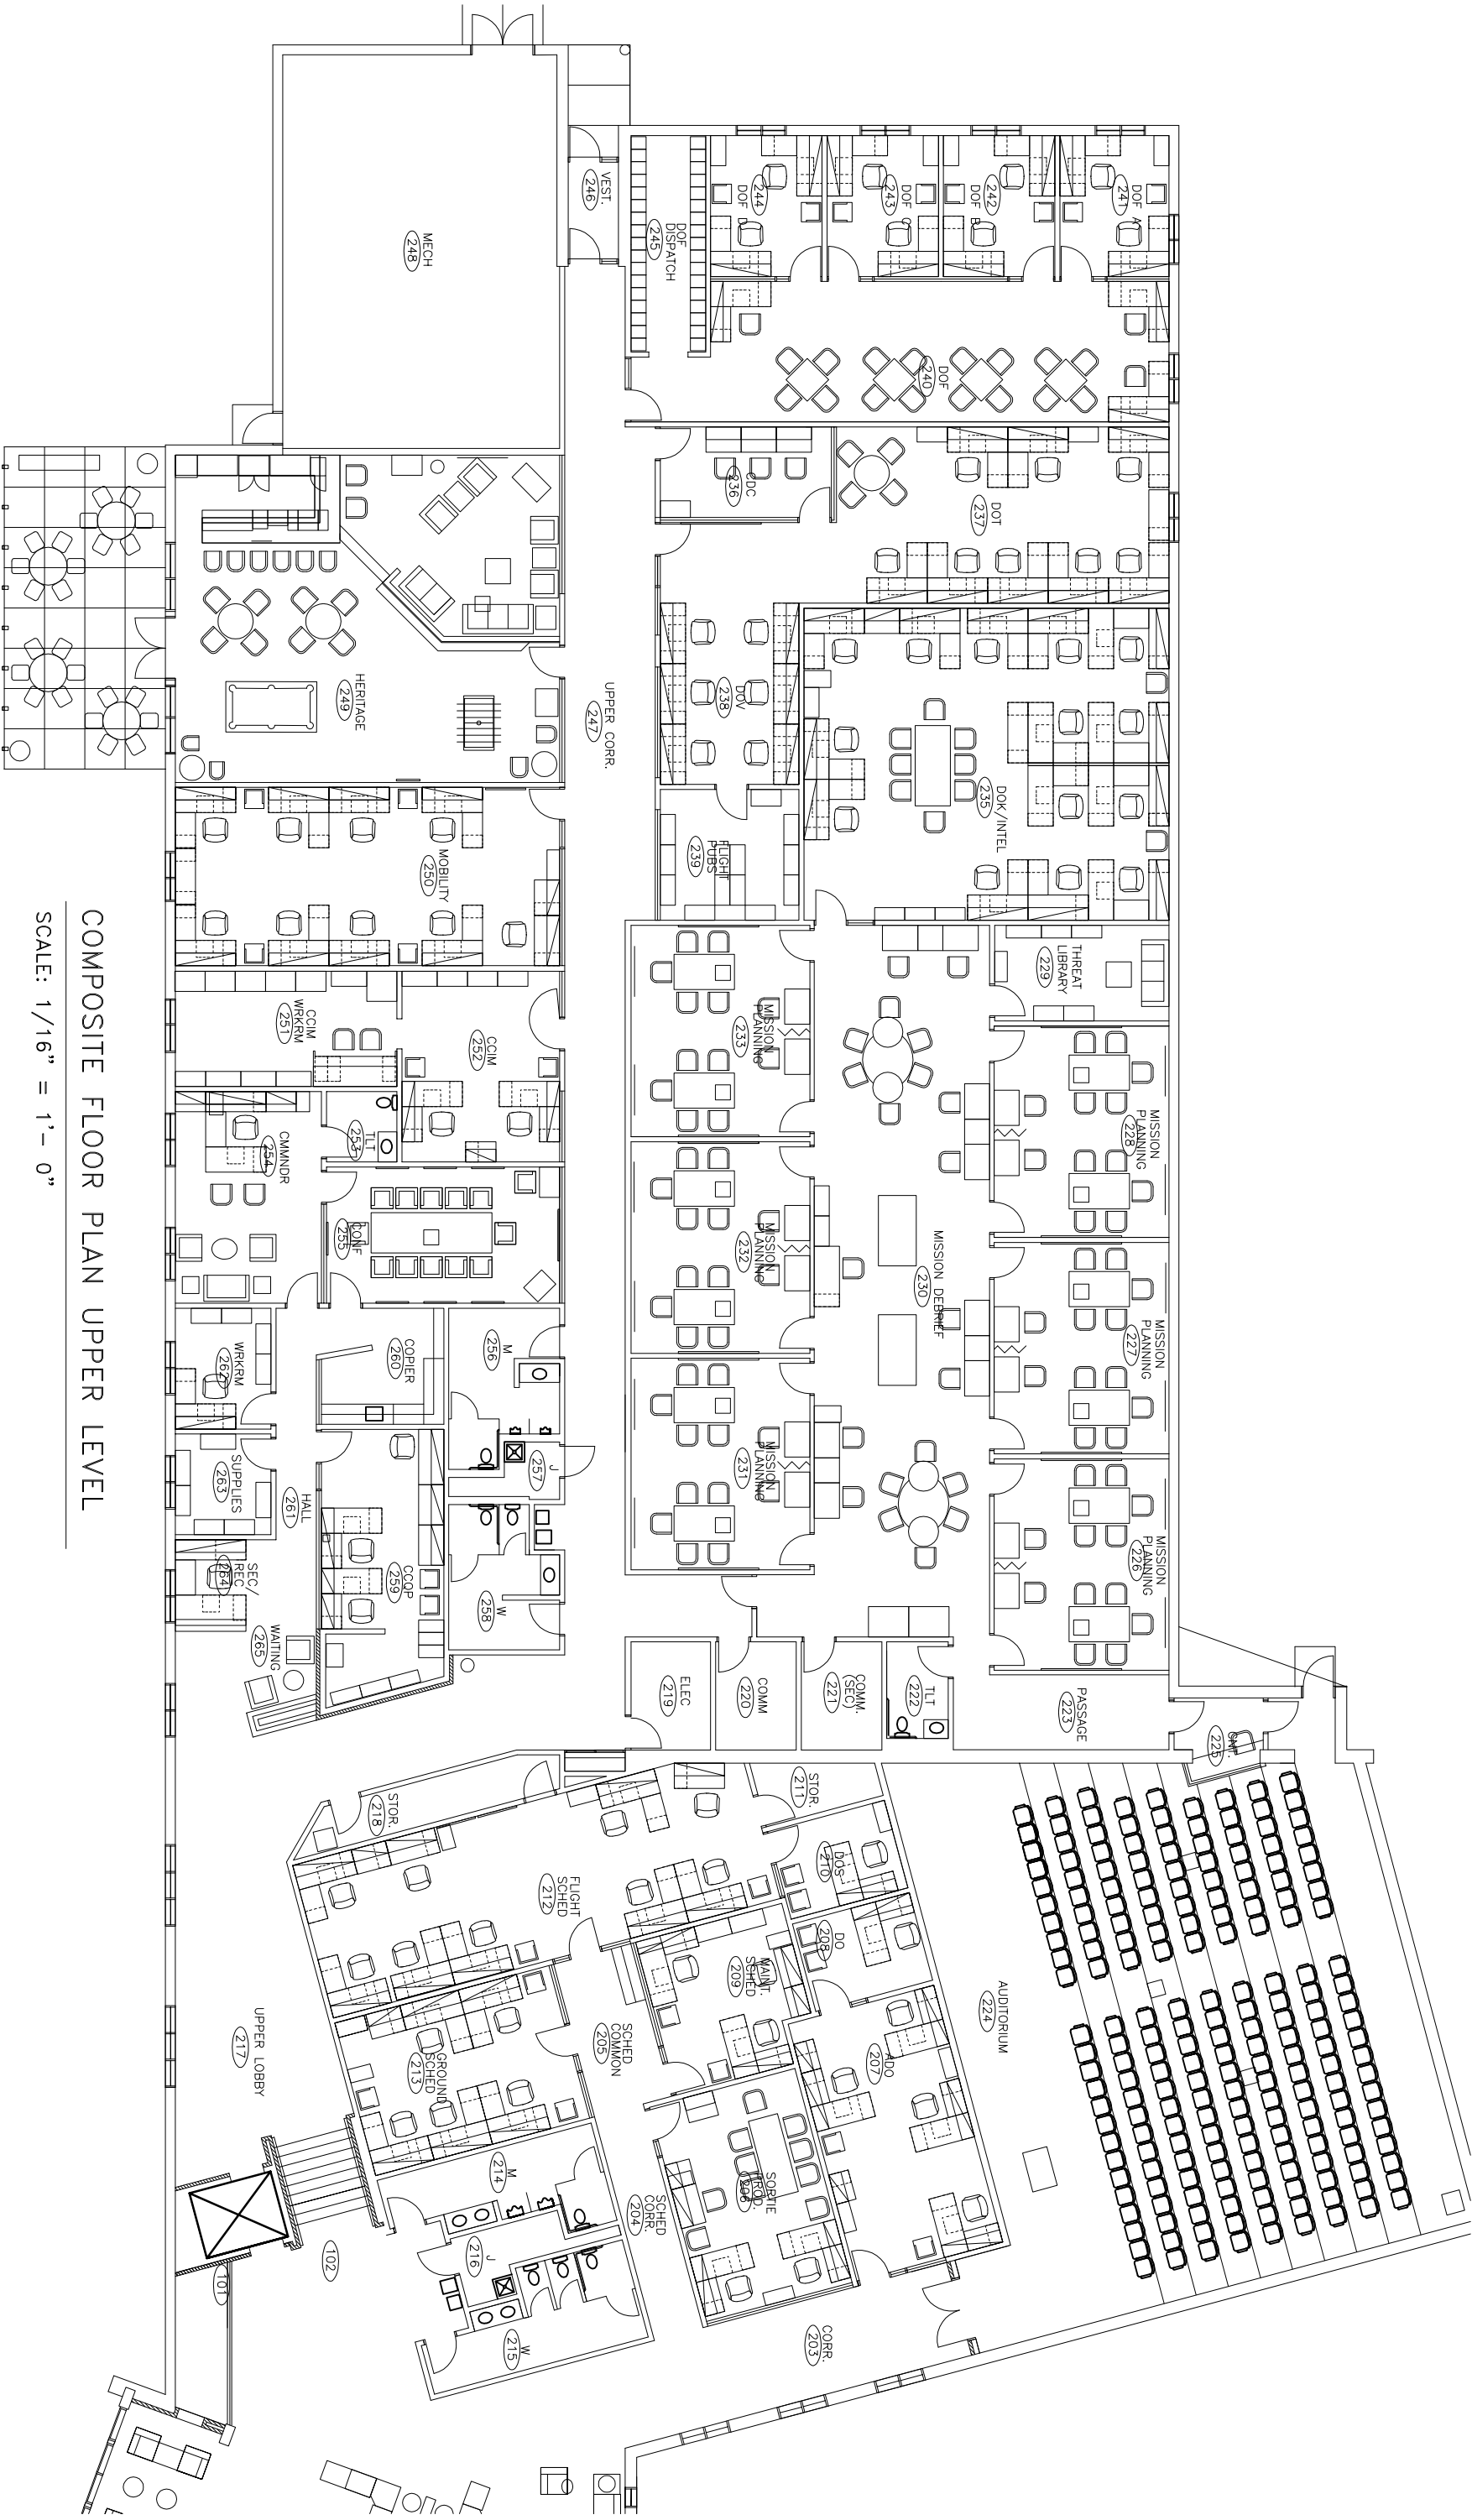

The appliance finishes will coordinate with the building finishes and architecture to present an aesthetic and efficient environment.
